SUMMARY

Full-stack developer and Dean's List CS graduate from Holon Institute of Technology (89 GPA), seeking a full-stack role.

Combines full-stack engineering with **disciplined use of agentic coding tools** (Claude Code) – Creator of **OwnYourCode** (167★ on GitHub), an open-source workflow framework for Claude Code that prioritizes engineer **ownership and comprehension** over AI generation. 1st place at H.I.T. Hackathon and 2nd place at AWS Public Sector Innovation Hackathon with **MentorHIT**.

SKILLS

Languages: TypeScript, JavaScript

Frontend: React, Tailwind CSS, HTML5, CSS3

Backend & APIs: Node.js, Express.js, REST APIs

Databases & Storage: MongoDB, Redis (Upstash)

Cloud & Serverless: AWS (Lambda, API Gateway, S3, DynamoDB), Vercel

DevOps & Tooling: Git, GitHub Actions (incl. AI-assisted PR reviews)

AI & Agentic Engineering: Claude Code (Agents, Skills, Hooks, MCP, custom slash commands), Model Context Protocol (MCP), LLM integration (Claude, OpenAI, AWS Bedrock), RAG architecture, vector search (Pinecone, OpenSearch), prompt engineering

Languages (spoken): Hebrew (native), English (professional)

PROJECTS

OwnYourCode – Open-Source Workflow Framework for Claude Code

Solo Project 167★ on GitHub • ownyourcode.dev • December 2025 – Present

- Addresses 'cognitive debt' – the documented phenomenon where developers lose code comprehension through AI over-reliance.
- Designed the architecture around 11 custom slash commands that form the workflow's core, 6 quality gates that block task completion until the developer can explain their own code, 5 adaptive user profiles for different experience levels (junior, career switcher, interview prep, etc.), and a global learning registry that compounds patterns across projects.
- Maintain the project end-to-end: cross-platform installers (macOS/Linux/Windows), MCP integrations (Octocode), and live documentation – used by developers across the Claude Code community.

MentorHIT – AI-Powered Academic Advisor (2nd Place, AWS Public Sector Innovation Hackathon)

Team Project (4 developers) • github.com/MentorHIT • May 2025 – September 2025

- Built the RAG ingestion pipeline: chunked syllabus PDFs, embedded them into an OpenSearch vector database, and integrated retrieval into a Lambda function – letting students ask natural-language questions against their actual course material.
- Co-architected the 2-step LLM query flow with the team (context planning → real-time data gathering across grades, courses, and live job-market sources) and built Lambda functions on the serverless AWS stack (Bedrock, DynamoDB, API Gateway, S3); selected AWS Nova Lite for the LLM after benchmarking for ~30s faster responses than alternatives.

Personal Portfolio Website

Solo Project • danielpodolsky.dev • November 2025 – Present

- Designed, built, and deployed a personal site end-to-end on React 19, TypeScript, and Vercel serverless functions – including an interactive chatbot that lets visitors ask natural-language questions about my experience and projects.
- Implemented the chatbot with semantic search over OpenAI embeddings stored in a Pinecone vector database, real-time streamed responses via the Vercel AI SDK with Claude Haiku 4.5, and Upstash Redis for rate limiting to cap API spend – selected Haiku 4.5 after testing multiple models for the speed/cost balance at this scale.

EDUCATION

B.Sc in Computer Science, Dean's List

Holon Institute of Technology • Aug 2025 • 89 GPA

AWARDS & HONORS

Innovation and Excellence at AWS and H.I.T Hackathon

- Featured in H.I.T's official article [highlighting the winning solution and team achievements](#).
